For each chart below, answer: What is it trying to tell you? Do you trust it? Why or why not?

Regional Comparison - Q3 2025

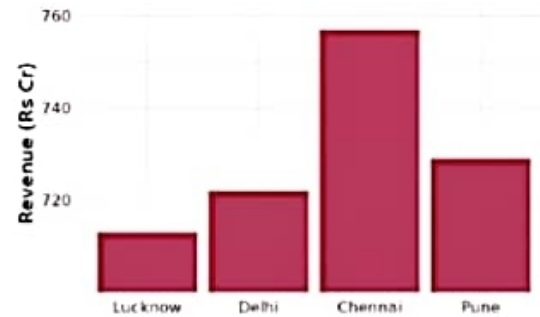

Chart 1

App Usage by Category (12 categories)

Chart 2

Storks Sighted vs. Human Births

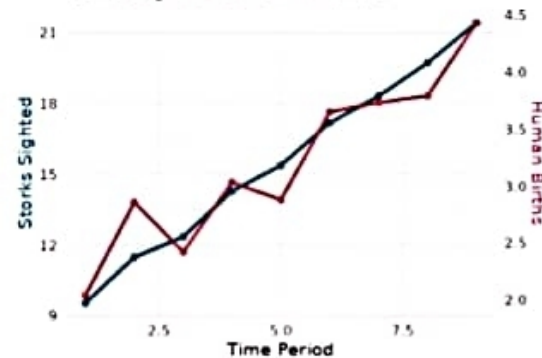

Chart 3

Temperature (deg C) vs. Ice Cream Sales

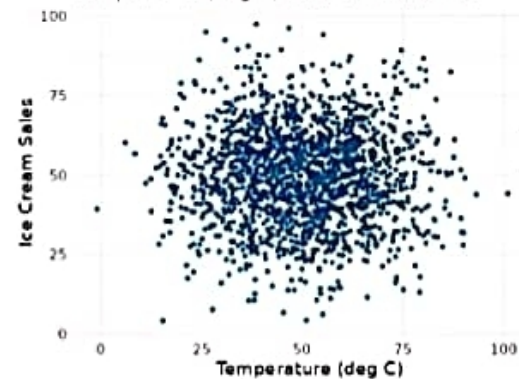

Chart 4

Your notes:

Roll-NO - 06

Reg-NO: 192325016

① Regional Comparison - Q3 2025

CHART-1

The graph compares the revenue generated by four different cities.

The four cities are

1. Lucknow
2. Delhi
3. Chennai
4. Pune.

* The main purpose is to tell about which city generated more revenue.

* There are two axis X and Y, X-axis represent the cities and Y-axis represents the revenue (Rs Cr)

* The graph is a bar chart.

* It shows Chennai has highest revenue with long bar.

* Lucknow has lowest revenue with short bar.

* We should not trust blindly because the Y-axis starts around ₹700Cr and difference is larger.

② CHART-2

APP usage by Category (12 categories)

- * The graph is a Pie Chart.
- * It shows the total app usage by 12 different categories.
- * Each section represents a different category.
- * If the section is larger then it is of the app used larger time.
- * we call the part of section in pie chart as a Slice.
- * Larger slice $\rightarrow$ Larger app usage
- * Small slice $\rightarrow$ less app usage.
- * we can trust partially by looking divided app categories but no labels are mentioned so we should look into that.

③ CHART-3

Storks sighted vs. Human Births

- * It is a line chart.
- * This graph shows comparison between stork sightings with human births over a different time period.
- * X-axis represents the Time Period
- * Y-axis represents the Storks sighted with human births.
- Blue line $\rightarrow$ storks sighted.
- Pink line $\rightarrow$ Human births.
- * Here both increase over a time period but not shown any relation between them.

④ CHART-4

Temperature (deg c) vs. Ice Cream Sales.

- * It is a Scatter Plot.
- * This graph shows the relationship between temperature and ice cream Sales.
- * X-axis represents Temperature ($^{\circ}\text{C}$) from 0°C to 110°C .
- * Y-axis represents sales of ice cream from 0 to 100.
- * The Scatter plot uses dots for representation.
- * Here the points are spread out all the area there is no particular pattern.
- * But mostly the sale are around 25 to 75 it is middle of the graph.
- * we cannot trust blindly, because the graph not shown any clear relationship.
