

LAB EXPERIMENT RECORD**29-09-2026--Set 1: Monthly Sales Data**

Department	AIML
Course Code / Course Name	DSA0601 / Data Handling and Visualization
Experiment	Data Visualization using R
Name	BANDLAPALLI BHANUTEJA REDDY
Register Number	192325016
Date	29 SEPTEMBER 2026
Day	Thursday

Aim

To visualize monthly sales data using a line chart, bar chart and scatter plot, and to build an interactive dashboard for exploring the sales data.

Dataset: Monthly Sales

Month	Sales (in \$)
January	15000
February	18000
March	22000
April	20000
May	23000

Question 1: Line Chart of Monthly Sales

Question: Create a line chart to visualize the monthly sales. Label the axes and title the chart appropriately.

Aim: To visualize the monthly sales trend using a line chart with labelled axes and a title.

Result: Sales rise from 15000 in January to 22000 in March, dip to 20000 in April, and reach the highest value of 23000 in May.

Question 2: Bar Chart of Top-Selling Products

Question: Generate a bar chart to display the top-selling products for the year. Label the chart elements.

Aim: To display the top-selling products for the year using a labelled bar chart.

Result: The chart ranks products by sales so the best sellers stand out; the dataset has no product column, so product-wise sales must be supplied.

Question 3: Scatter Plot of Advertising Budget vs Monthly Sales

Question: Develop a scatter plot to explore the relationship between advertising budget and monthly sales. Explain the insights drawn from the scatter plot.

Aim: To explore the relationship between advertising budget and monthly sales using a scatter plot.

Result: The plot shows whether higher advertising budgets lead to higher sales; the dataset has no advertising budget column, so a conclusion needs those values.

Question 4: Interactive Sales Dashboard

Question: Build an interactive dashboard combining the line chart and bar chart to allow users to explore sales data interactively.

Aim: To build an interactive dashboard that combines the line chart and bar chart for exploring sales data.

Result: The dashboard places both charts together, and filters on month and product let users explore sales interactively.

Overall Result

Observation: Total sales over the five months were 98000, with an average of 19600 per month and the highest sales in May (23000).
